Viruses and Bacteria

Reproduction: Bacteria reproduce by binary fission, a process in which one cell pinches into two cells. In eukaryotes, however, microtubules pull chromosomes to opposite poles of the cell during mitosis. Afterward, the cytoplasm of the eukaryotic cell divides in half, forming two cells.

and Bacteria Section:

Viruses Read the

passage below. Then

answer the questions

that follow. Viruses are

pathogens—agents

that cause disease.

Viruses lack the

enzymes necessary for

metabolism and have

no structures to make

proteins. Therefore,

viruses must rely on

living cells for

replication.
